

Mitra Website — Product & Design Brief

For building in Figma (or feeding to a Figma AI generator)

1. Positioning (read this before designing anything)

Granola positions itself as **a private notepad** — quiet, personal, "no bot in the room." Meetily positions itself as **the privacy/self-hosted alternative** — technical, open-source, security-first. Both are excellent, but both are essentially *note-taking tools*.

Mitra should not fight either of them on their own turf. Mitra's wedge is:

Mitra isn't your notepad. Mitra is the assistant who's actually in your corner — plugged into every meeting on your calendar, quietly making sure you show up sharper, follow up faster, and never drop a ball, in the currency and context of how business actually gets done here.

Three positioning pillars to carry through every page:

1. **A person, not a panel.** Language should feel like describing a sharp EA/chief-of-staff, not a "notetaker" or "transcription tool." Verbs like *prepares you, follows up for you, remembers for you, has your back* — not *records, transcribes, logs*.
2. **Built here, not adapted here.** Local payment rails (Paystack/Flutterwave), an understanding of how African corporate/business culture runs (WhatsApp follow-ups, data costs, multi-currency teams, hybrid connectivity), instead of a US tool with Naira bolted on.
3. **Competitive edge, explicitly.** The site should say the quiet part out loud: people who use Mitra walk into rooms more prepared than the person next to them. This is a career/status tool, not just a productivity tool.

Keep the tone confident and warm — closer to a well-dressed, well-connected friend who always has the memo before you do, than a sterile SaaS company.

2. What to borrow vs. what to deliberately avoid

Borrow (proven UX patterns worth reusing):

- Granola's "Before / During / After" narrative structure to explain the product in three simple beats.
- Granola's live product mockup embedded directly in the hero (not a static screenshot — an animated "notes appearing" moment).
- Meetily's FAQ-as-trust-builder approach, but redirected from "is my data safe from the cloud" to "does this actually work with how I run meetings, pay for software, and follow up with people."
- Both sites' use of real logos/testimonials for credibility — Mitra should reserve this slot but launch with **local company logos and African operator testimonials**, not generic Silicon Valley names.

Avoid / differentiate:

- Don't copy Granola's stark black-and-white, "quiet SF minimalism." Mitra needs more warmth and color confidence — see §3.
 - Don't copy Meetily's dense, SEO-stuffed, feature-checklist tone. Mitra should read like 6–8 confident sections, not 40 FAQ accordions.
 - Don't lean on "AI meeting notetaker" as the headline category — lean on "personal/executive assistant for your work life," with meetings as the entry point, not the whole story.
-

3. Visual & Brand Direction — "Afro-Modern Executive"

A direction that's unmistakably African without being decorative or "tourist-brochure." Think **modern Lagos/Nairobi/Accra fintech and hospitality branding** — confident, warm, high-contrast, editorial — closer to Moniepoint, Paystack's own brand, or a boutique Accra hotel than to generic SaaS blue.

Color palette

- Primary background: warm off-white / sand (**#FAF6F0**), not clinical white.
- Ink: near-black charcoal with a warm undertone (**#1B140F**) for text — never pure **#000**.
- Signature brand color: deep terracotta / burnt clay (**#C9542C** or similar) as the primary accent — used for CTAs, key highlights, the logo mark.
- Secondary accent: rich indigo/night blue (**#1B2A4A**) for contrast sections, dark-mode blocks, footer.
- Tertiary accent: warm gold/ochre (**#E8A94C**) used sparingly — icons, small UI highlights, "live" indicators.
- Optional pattern accent: a subtle, abstracted geometric motif (inspired by kente, mudcloth, or Adinkra symbols) used as **texture, not decoration** — thin line patterns in

section dividers, loading states, or the 404 page. Never literal fabric prints; keep it minimal and modern so it reads "considered," not "costume."

Typography

- Display/headline font: a confident modern grotesk with a bit of character — e.g., something in the family of **Söhne, General Sans, or Clash Display** — bold, tight tracking, large scale (72–96px hero headlines on desktop).
- Body font: a clean humanist sans for readability — e.g., **Inter or General Sans Regular**.
- Optional accent typeface: a warm serif or slab (e.g., **Fraunces** or **Canela**) used only for pull-quotes/testimonials to add editorial warmth — mirrors what boutique African fintech/lifestyle brands do well.

Imagery style

- Real people in real African business settings — boardrooms, co-working spaces, coffee meetings, hybrid calls — shot warm, natural light, not stock-photo stiff.
- Product UI shown in-context (floating notes card next to a Zoom/Teams call), same trick Granola uses, but styled in Mitra's terracotta/indigo palette instead of Granola's grey/green.
- Avoid clichéd "Africa" imagery (savannah, tribal print backgrounds). This is a corporate/executive tool — imagery should look like *Forbes Africa*, not a travel brochure.

Iconography & shape language

- Rounded-but-confident corner radius (12–16px), not fully pill-shaped — feels premium, not playful/childish.
- Icons: simple line icons with one filled accent color, consistent stroke weight.

Motion

- Notes "writing themselves" in real time in hero (mirrors Granola's enhancing-notes animation) — this is the single most important motion moment on the site; it's the "aha" visual.
- Subtle parallax/fade-ins on scroll, not heavy 3D or gimmicky animation — the brand is "sharp assistant," not "flashy startup."

4. Full Sitemap

Primary nav

1. Product (dropdown: How It Works · Meeting Assistant · AI Notes & Follow-ups · Integrations)
2. Use Cases (dropdown: Founders & Executives · Sales Teams · Consultants & Agencies · NGOs & Development Orgs)
3. Pricing
4. Enterprise
5. Resources (dropdown: Blog · Help Center · Security)
6. **Download** (primary CTA button)
7. **Sign in** (secondary link)

Full page list

5. Page-by-page breakdown

Home (/)

1. **Nav** — logo, primary links, "Sign in," prominent "Download for free" CTA button in terracotta.
2. **Hero** — Headline framed as a promise, not a feature: *"The colleague who's always one step ahead of the room."* Sub-headline naming the mechanism: joins your meetings,

remembers everything, follows up before you have to — built and priced for how business runs across Africa. Primary CTA: *Download for free*. Secondary CTA: *See how it works* (scroll anchor). Live animated product mockup on the right: a note "writing itself" during a call, styled in brand colors.

3. **Trust bar** — "Built on proven, MIT-licensed technology" + row of local company/partner logos (placeholder until real logos exist) + a one-line stat (e.g., "X hours of meeting time given back").
4. **Before / During / After section** (three-part scroll narrative, Granola-style but rewritten):
 - *Before*: "Walks into every meeting already briefed" — calendar sync + auto-prepared context.
 - *During*: "Present with you, not instead of you" — live transcription, no bot joining the call.
 - *After*: "Does the admin so you don't have to" — summaries, action items, follow-up emails, one click.
5. **"Built for how Africa does business" section** — this is Mitra's real differentiator, give it real estate: local payments (Paystack/Flutterwave logos), works on patchy connectivity, multi-currency teams, WhatsApp-friendly exports (if roadmap supports it).
6. **Feature grid** — 5–6 cards: Auto meeting detection, One-click notes/summaries/follow-ups, Calendar sync, Cross-platform (Mac/Windows/Linux), Private by default, Local billing.
7. **Testimonials** — 3–5 quotes from early users/pilot customers, styled with the serif accent font.
8. **Comparison teaser** — short "Mitra vs. the rest" table (3 columns: Mitra / Granola / Generic notetakers) highlighting local payments, price in local currency, and "built for African business context."
9. **Final CTA band** — dark indigo background, gold accent, "Download Mitra — free to start" + platform icons (macOS/Windows/Linux).
10. **Footer** — full sitemap columns (Product, Use Cases, Company, Resources, Legal), social links, small "Made in [city]" note for authenticity.

How It Works (/how-it-works)

Deep-dive version of the Before/During/After narrative with actual product screenshots for each stage, plus an FAQ block addressing common friction (permissions needed, what happens if I forget to start it, does it work with in-person meetings).

Meeting Assistant / AI Notes / Integrations (feature pages)

Each follows the same template: hero statement of the specific job-to-be-done → screenshot/demo → 3–4 supporting detail blocks → relevant testimonial → CTA. Integrations page should show Zoom/Teams/Meet logos plus calendar and (future) CRM/Slack connectors.

Use Cases (/use-cases/*)

Template: role-specific headline (e.g., "For founders who can't afford to miss a signal"), 3 pain points → 3 Mitra solutions, one testimonial from that persona, CTA. Prioritize

Founders/Executives and **Sales teams** first — highest willingness to pay and clearest ROI story.

Pricing (/pricing)

- Plan cards: Free (generous, e.g. "unlimited notes, 30-day history" mirroring Granola's model) / Pro (priced in Naira with USD equivalent shown) / Enterprise (custom).
- Payment method icons prominently shown: Paystack, Flutterwave, cards.
- FAQ block on billing specifically (currency, invoicing, team billing).

Enterprise (/enterprise)

Admin controls, security posture, team billing, dedicated support, "talk to sales" form.

Security (/security)

Directly answer the anxiety Meetily's whole site is built around: where audio goes, what's encrypted, what's stored locally vs. cloud, data retention, deletion controls. This page builds trust without needing Meetily's "100% local" positioning — Mitra can be honest that it's cloud-assisted but rigorous about privacy.

Comparison pages (/vs/granola, /vs/otter, etc.)

Straightforward table: feature parity + the two things Mitra wins on outright (local payments, African business context) stated plainly, not overhyped.

About (/about)

Founder story — why this is being built from here, for here. This page is where the "personal assistant, not a notetaker" positioning gets its most human treatment. Include team photos, mission statement, and a nod to the open-source foundation (transparency builds trust).

Careers, Blog, Help, Contact, Legal

Standard templates — keep visually consistent with the rest of the system (same header/footer, type scale, spacing) but can be simpler/lower-fidelity than the money pages above.

6. Design system quick-reference (for Figma setup)

- **Grid:** 12-column, 1280px max content width desktop, 24px gutters; single column mobile with 20px side margins.
 - **Type scale:** Hero 72/80px, H1 48px, H2 36px, H3 24px, Body 16–18px, Small/caption 13px. Line-height ~1.1 for display, ~1.5 for body.
 - **Spacing scale:** 4/8/12/16/24/32/48/64/96/128px.
 - **Corner radius:** 12px (cards), 16px (product mockup frames), 999px only for pill buttons/badges.
 - **Buttons:** Primary = terracotta fill, cream text, 12px radius, subtle shadow on hover. Secondary = outline/ghost in ink color.
 - **Components to build first in Figma:** Nav bar (with dropdown), Hero product mockup card, Feature card, Testimonial card, Pricing card, Footer, Comparison table, CTA band.
-

7. Ready-to-paste build prompt

Use this condensed version directly in Figma AI / Figma Make / Figma First Draft, or hand to a designer as the brief:

Design a modern, warm, editorial marketing website for **Mitra**, an AI meeting assistant positioned as a personal/executive assistant for African professionals — not a generic "notetaker." It auto-joins/detects meetings (Zoom, Teams, Meet), transcribes without a bot in the call, and turns transcripts into notes, action items, and follow-up emails with one click. It's built for the African market: local payments via Paystack/Flutterwave, multi-currency pricing, and messaging tailored to how business actually runs here.

Aesthetic: "Afro-modern executive" — warm sand background (#FAF6F0), warm charcoal ink (#1B140F), terracotta primary accent (#C9542C), deep indigo secondary (#1B2A4A), ochre highlight (#E8A94C). Confident modern grotesk display type (Clash Display/General Sans style) paired with a humanist sans body (Inter), and an editorial serif (Fraunces-style) reserved for quotes. Rounded-but-sharp 12–16px corners, generous whitespace, subtle Adinkra/geometric line-pattern accents used only as minimal texture — never literal fabric prints. Real, warm, natural-light photography of African professionals in meetings — never stock-cliché "tribal Africa" imagery.

Hero: confident promise-driven headline ("The colleague who's always one step ahead of the room"), sub-headline explaining the mechanism, primary CTA

"Download for free," animated product mockup showing notes writing themselves live during a call, styled in brand colors.

Pages to design: Home, How It Works, Meeting Assistant, AI Notes & Follow-ups, Integrations, Use Cases (Founders/Executives, Sales, Consultants, NGOs), Pricing (with Paystack/Flutterwave payment icons and Naira pricing), Enterprise, Security/Trust, Comparison (Mitra vs. Granola / vs. generic notetakers), About/Story, Careers, Blog + article template, Help/Docs landing, Contact, Terms & Privacy, 404.

Home page structure: Nav → Hero with live product mockup → trust bar (partner logos + stat) → "Before/During/After" three-part narrative → "Built for how Africa does business" section (local payments, connectivity resilience, multi-currency) → feature grid (6 cards) → testimonials (editorial serif quote style) → comparison teaser table → dark indigo final CTA band → full footer.

Build a reusable component set first (nav w/ dropdowns, hero mockup card, feature card, testimonial card, pricing card, comparison table, CTA band, footer), then assemble the page templates from those components. Keep motion restrained — scroll fade-ins and the live-note-writing hero animation are the only "hero" motion moments; everything else stays calm and confident.
